

## CAREER OPPORTUNITY: R&D CHEMIST

Due to continued growth and expansion of Polyroof, part of the Roberts Group of companies alongside Roberts Manufacturing Ltd, there is a requirement to recruit a new member to its research and development team.

The preferred candidate is likely to have a degree, HND or similar in chemistry or related science subjects and will be involved primarily in the development of liquid applied waterproofing systems as well as other speciality resins, including all aspects from conception to production.

The role will be wide and varied and as well as being part of the R&D team the candidate will also closely assist the Group R&D Director with many other aspects including product approvals, product testing, site evaluation, trouble-shooting, quality control, CoSHH and CLP requirements, and many other aspects

As well as liaising internally at all levels, the role will include meeting with suppliers of raw materials and with end users, will require a good level of communication skills, and could include some travel.

The successful candidate will be a confident and highly motivated individual who is looking to grow within the company and take on increasing responsibilities and leadership as time progresses.

He/she will be able to work equally well unsupervised and within a dynamic team environment.

Experience in many aspects of coatings technology, in particular liquid applied roof waterproofing technology and/or polymer development is preferred, though on the job training and direction will also be given. It is important that the candidate shows a willingness to learn and progress.
